This file is part of the cQUIANT Collaborative Intiative. In 1972, the children started to play games with cards and dice. One day they saw a king with several servants and they began to play the game in the category of the king. When the owner saw what his children were doing, he yelled at them. But then he became curious and began to think about the meaning of the game. . after a year of study, it was necessary to write a project paper for the class at the Master's Degree in the Faculty of Economics and Business at the University of Belgrade. This was a joint work among the students who attended the course. Three students from the same class got the same tasks, but on different Saturdays, at different times. And they could not study the topic because they were too busy. This is a story about the encounter of the students in the class room at the preliminary stage of the task. The story takes place in the room of the student who is going to do the task in the meeting. The student from the room enters the room, and it becomes dark. He sees a large, dark object that he likes, and he begins to look at it. He begins to dig in his pocket and takes his notebook out. After a few minutes the student tries to sit down and writes down the coordinates. He decides to take the notebook and switch on the light. The light, which is about three meters high and three meters wide, is stored in a thin box. The student presses a switch and the light appears. The light is a giant eye. Over the eye is the monitor of a laptop computer. The student enters the password in the computer and begins to write. The room is almost empty; only a chair and the desk with the computer are there. No one says anything, but all of them feel that something unusual is going to happen. There are only two windows in the room. One of them is a large window, and it is situated on the north side of the room. It opens on a balcony, and behind it there is a balcony of the same size. They sit there and listen to the quiet of the night. Then someone starts to knock on the window. Someone steps inside the room. It is hard to distinguish who it is. The person stands motionless for a while and then begins to look around the room.

been translated by Zila Waqas M.U. Khanani Urdu Translator, IAS.Q: How to get the most specific route in android? I have a situation I am trying to understand. I want to test a route, but I get the most generic route. I have the following code: List restrictions = new ArrayList(); restrictions.add("com.example.restrictions.AllowedApp"); Restrictions restrictions = new Restrictions(restrictions); List routes = null; for (Route route : routesDao.getAll()) { String[] matchTerms = new String[route.getMatchTerms().size()]; for (int i=0; i (); break; } } And the following line throws a NullPointerException: matchTerms[i] = Uid.fromString(match); How come it throws a NullPointerException, and what is the most specific route, if there is only one route match? A: From the Google Map API Roadmatch documentation: All route matches are saved in the same Place object, and this method
