application programming interface (API) allows programmers to interact with the AutoCAD For Windows 10 Crack software and create new applications. API implementations can come in any of several forms, including Visual LISP, or C++ classes, or ObjectARX, or VBA. Visual LISP Visual LISP (Visual Interactive Lisp) is a language for writing macros in AutoLISP. There are two varieties of Visual LISP: VisLisp and Visual LISP for AutoCAD Cracked Version. VisLisp was the base for the architectural Visual LISP. The architectural version of

Visual LISP allowed designers to create macros to manipulate an architectural model, and the CAD model. Visual LISP was retired with the release of AutoCAD 2014. Visual LISP had been one of the AutoCAD's extensions. Visual LISP is included with AutoCAD and is a part of the current release series (2012, 2013, 2014, 2015, 2016, 2017). Visual LISP for AutoCAD The Architectural Visual LISP (AVL) was an architectural extension of the VisLisp. The architectural Visual LISP allowed architects to create macros for creating parametric views and

models. Visual LISP for AutoCAD was retired with the release of AutoCAD 2014. It was a paid plugin. ObjectARX ObjectARX is a C++ class library, which was the base for the discontinued AutoCAD-based products, Architectural Visual LISP, Architectural Visual LISP for AutoCAD, and Architectural Visual LISP extensions for AutoCAD.

AutoCAD Architecture AutoCAD

AutoCAD's Markup Import and Markup Assist capabilities allow you to import comments and corrections from both printed paper and PDF documents. This functionality is based on a new set of intelligent drawing-reading rules for importing comments from these two different document types. Importing

comments from a PDF allows you to benefit from scanned/photographic quality and also add color annotations. You can also import text and digital annotations made in Inkscape, another drawing program. The Import to DWG and Markup Assist functions each can process hundreds of comments or thousands of changes at a time. In the Import to DWG function, you can import comments from a file, a folder, or the entire file system. You can also import comments from PDF documents and Inkscape annotations. After the import process is complete, AutoCAD automatically

adds the comments to the existing drawing. You can now directly view, edit, and share the comments as part of your drawing. In the Markup Assist function, you can add comments to your drawings and then perform markup operations to modify, correct, and even animate the drawings. In the Markup Assist function, you can add comments to your drawings and then perform markup operations to modify, correct, and even animate the drawings. You can also modify and correct the imported comments while retaining the underlying drawing. You can

view and export any selection or area in the drawing or have AutoCAD export the selection as a new DWG or PDF file. You can adjust the rotation and scale of any area in the drawing with the Grip function. You can edit any area or label in the drawing or have AutoCAD export the edits to a new DWG or PDF file. You can start a new drawing from a selection of any area in the drawing or have AutoCAD export the drawings to a new DWG or PDF file. You can create new blocks using the new block types, including the Dynamic Block and Block Group. The Dynamic Block

lets you create a file with a sequence of commands and automatically run the commands at any time. The Dynamic Block also allows you to embed information such as blocks, variables, and layers within a block. The Block Group allows you to create a group of blocks that are associated with each other in a file. The dynamic links between blocks in a block group allow you to maintain the context of the blocks as you update them.
